

Power Talk Organized by the **INTERNATIONAL ORGANIZATION
FOR SUBSTATIONS DIGITAL DEVELOPMENT**

Power Talk Southeast Europe is a regional energy conference dedicated to power utilities in Southeast Europe. Organized by the International Organization for Substations Digital Development - this technical conference aims to foster cooperation, share experiences, and enhance the professional knowledge and problem-solving capabilities of utility teams responsible for asset management in the Power Generation, Transmission, and Distribution utilities in the region.

The conference features panel sessions led by moderators, where the Transformer, Rotating machines, Substation, Hydro, Thermal and other [working groups discuss topics](#) detailed on the event's agenda. Each panel session includes two esteemed experts from every participating country, who share insights into challenges encountered and innovative solutions. All participants will have an opportunity to participate in the working group discussions and ask questions. There will be two panel sessions for each working group.

In addition to the working groups panel sessions, five plenary sessions will gather Regulators, transmission, generation, and distribution managers and the regional investors to explore opportunities for enhanced cooperation in energy markets within Southeast Europe, with a particular emphasis on promoting stability, efficiency, and sustainability and deliberate on crucial industry [topics](#).

Power Talk Southeast Europe does not include sponsored presentations nor supports marketing participation in the sessions. Experts from OEM manufacturers will participate in the working groups solely as knowledgeable professionals, without reference to specific portfolio nor corporate affiliations influencing their contributions.

As part of our ongoing commitment to fostering innovation and advance technology for humanity - we are pleased to announce Substation Digital. This free software is the collective achievement of the organization which was developed for substations smart maintenance. Training for the software will take place at this event. [Click here](#) for more info about this unique substation management free software created and shared by the organization.
